Abstrak

Persepsi masyarakat terhadap pelayanan rumah sakit sangat dipengaruhi oleh penurunan kinerja perawat. Kualitas hidup perawat merupakan salah satu faktor yang dapat mempengaruhi kinerja perawat. Sebagai bentuk kepedulian terhadap kondisi dan kebutuhan perawat, peningkatan kualitas kehidupan kerja akan menghasilkan tingkat loyalitas yang tinggi, yang akan berpengaruh pada pelayanan yang diberikan. Penelitian ini diharapkan dapat memutuskan hubungan antara kepuasan pribadi petugas medis dengan penampilan petugas di RSJD Surakarta

Penelitian ini menggunakan desain penelitian korelasi dengan pendekatan *cross sectional*, dimana pengambilan data hanya dilakukan dalam satu waktu saja meliputi data kinerja perawat dan kualitas hidup perawat. Jumlah sampel pada penelitian ini sebanyak 57 perawat dengan Teknik sampel *non probability sampling*. Penelitian dilakukan di RSJD Surakarta pada Desember 2022- Mei 2023. Instrumen penelitian menggunakan kuesioner *ProQOL* dan kuesioner kinerja perawat. Analisa data menggunakan uji kendall tau.

Distribusi kinerja perawat di RSJD Surakarta yang paling banyak adalah baik sebanyak 57 perawat (100%). Distribusi kualitas hidup perawat di RSJD Surakarta minimal nilai 72, maksimal 150 dengan rata-rata 92,37 dan standar deviasi 10,148. Hasil Analisa uji kendall tau didapatkan nilai *p value* 0,000 maka ada Hubungan kualitas hidup perawat dengan kinerja perawat di RSJD Surakarta dengan nilai *p value* 0,000.

Kualitas hidup perawat berkaitan serta memiliki kekuatan hubungan yang sedang dengan kinerja perawat di RSJD Surakarta.

Kata Kunci : Kualitas Hidup, Kinerja, Perawat

ABSTRACT

The decline in nurse performance greatly affects the service image of a hospital in the community. One of the factors that can affect the performance of nurses is the quality of life of nurses. Improving the quality of work life is a form of concern for the conditions and needs of nurses so that it will create high loyalty which will have an impact on the services provided. This study aims to determine the relationship between the quality of life of nurses and the performance of nurses in RSJD Surakarta.

This study uses a correlation research design with a cross-sectional approach, where data collection is only done at one time, including data on nurse performance and quality of life for nurses. The number of samples in the study were 57 nurses with a non-probability sampling technique. The research was conducted at the Surakarta Hospital in December 2022-May 2023. The research instrument used the PROQOL questionnaire and the nurse performance questionnaire. Data analysis using the Kendall Tau test.

The highest distribution of nurse performance in RSJD Surakarta was 57 nurses (100%). The distribution of the quality of life of nurses at the RSJD Surakarta has a minimum value of 72, a maximum of 150 with an average of 92.37 and a standard deviation of 10.148. The results of the Kendall Tau test analysis obtained a p value of 0.000, so there is a relationship between the quality of life of nurses and the performance of nurses in Surakarta Hospital with a p value of 0.000.

The quality of life of nurses has a relationship with the performance of nurses in RSJD Surakarta.
